

Infosys Springboard Virtual Internship 7.0

Completion Report

Team Details

Batch Number: Team C

Start date: 15-07-2026

Names:

S.No	Name
1	Nimisha Mishra
2	Kirti Chandra Nayak
3	Nadiminti Tharun
4	Jhansi Oruganti
5	Arijeet Dhaka

Internship Duration: 8 Weeks

1. Project Title

AI-POWERED INTELLIGENT SALES FORECASTING PLATFORM USING PREDICTIVE ANALYTICS GROUP-1

2. Project Objective

- To develop an AI-powered sales platform that centralizes lead information and supports the complete lead-to-opportunity workflow.
- To use predictive analytics and AI-based lead intelligence to evaluate lead quality, identify high-potential prospects, and prioritize sales efforts.
- To generate actionable sales recommendations from lead attributes, company information, outreach activity, and conversation insights.
- To analyze call transcripts using Conversation Intelligence and extract structured information such as requirements, interests, objections, and buying signals.
- To provide an interactive dashboard for monitoring leads, scores, recommendations, activities, pipeline movement, and sales analytics.
- To integrate the modules through a FastAPI backend, SQLAlchemy/SQLite data layer, and Streamlit interface for an end-to-end working demonstration.

3. Project description in detail

The AI-Powered Intelligent Sales Forecasting Platform is an integrated sales enablement and predictive analytics system designed to help sales teams manage leads, understand prospects, prioritize opportunities, and make data-driven decisions. The platform brings together lead management, company intelligence, AI outreach, lead scoring, recommendation generation, conversation intelligence, CRM-style activity tracking, and sales analytics in one workflow.

The system follows an end-to-end flow: user authentication → lead creation or CSV import → AI lead intelligence and company analysis → personalized outreach generation → AI lead scoring and recommendation → conversation transcript analysis → score reassessment and CRM/Kanban pipeline updates → dashboard and sales analytics. The backend is implemented using FastAPI with SQLAlchemy and SQLite, while the user interface is built with Streamlit. AI capabilities use an LLM-based integration, including Groq, to generate and interpret sales intelligence.

The project is organized into six functional areas: M1 Lead Management & Prospect Database, M2 Lead Intelligence & Company Analysis, M3 AI Outreach Generation, M4 Lead Scoring & Recommendation Engine, M5 Conversation Intelligence & CRM Integration, and M6 Dashboard & Sales Analytics. Together, these modules transform raw lead information and sales conversations into structured insights and prioritized sales actions.

4. Timeline Overview

Week	Activities Planned	Activities Completed
Week 1	Project kickoff, requirement analysis, team coordination, architecture planning.	Finalized project scope, modules, workflow, technology stack, and responsibilities.
Week 2	Lead database and backend foundation.	Implemented lead creation, storage, retrieval, authentication, and basic lead-management workflow.
Week 3	Lead intelligence and company analysis.	Added AI-based company/lead analysis and structured prospect information.
Week 4	AI outreach and lead scoring.	Implemented personalized outreach generation and AI lead scoring using lead attributes and context.
Week 5	Recommendation engine and sales prioritization.	Implemented recommendation logic to suggest sales actions based on lead score and available information.
Week 6	Conversation Intelligence and CRM integration.	Added transcript analysis, structured conversation insights, persistence, score reassessment, and CRM-style activity updates.
Week 7	Dashboard, pipeline and analytics integration.	Integrated Streamlit screens, lead views, scoring, recommendations, conversation insights, Kanban/CRM flow, and analytics.
Week 8	Testing, documentation, presentation and final demo.	Completed integration testing, documentation, presentation preparation, and end-to-end project demonstration.

4a. Key Milestones

Milestone	Description	Date / Period Achieved
Project Kickoff	Requirement gathering, team formation, architecture planning, and module finalization.	15-07-2026
Prototype / First Draft	Lead management foundation, database connection, authentication, and initial Streamlit screens.	27-07-2026
Mid-Term Review	Demonstration of lead intelligence, AI scoring, outreach generation, and recommendation workflow.	11-08-2026
Final Integration	Conversation Intelligence, CRM activity flow, score reassessment, dashboard and analytics integration.	21-08-2026
Final Submission	Testing, documentation, presentation preparation, and complete end-to-end demo.	26-08-2026

5b. Project execution details

The project was implemented as a modular sales intelligence platform. The first stage established the lead database and application foundation, followed by AI-driven intelligence and outreach. Lead scoring and recommendations were then integrated so that the system could prioritize prospects and suggest suitable next actions. Conversation Intelligence was added to analyze sales call transcripts and convert unstructured conversations into structured insights. The resulting information is persisted against the lead and can be used for reassessment of lead quality. CRM-style activity and follow-up management support continued tracking of the sales process.

The final Streamlit dashboard brings the modules together and provides an interactive view of leads, AI scores, recommendations, conversations, pipeline stages, activities, and sales analytics. The backend uses FastAPI APIs, SQLAlchemy for database interaction, and SQLite for the project database. The AI layer uses an LLM integration, including Groq, for analysis and generation tasks.

6. Snapshots / Screenshots

Screenshot 1 – Login / Authentication Screen

The screenshot displays the SalesGenie login interface. At the top left, the 'SalesGenie' logo is shown in a bold, dark font. Below the logo, the word 'Login' is centered. The form consists of two input fields: an 'Email' field containing the text 'nimishamishra.cs24@gmail.com' and a 'Password' field with masked characters. To the right of the password field is a small eye icon for toggling visibility. A large blue 'Login' button is positioned below the password field. At the bottom, there are two separate buttons: 'Forgot Password?' on the left and 'Don't have an account? Sign Up' on the right.

Screenshot 2 – Lead Details page

Screenshot 3 – Lead Overview tab

The screenshot displays the SalesGenie AI Sales Assistant interface. On the left is a dark blue sidebar with the SalesGenie logo, user information for Nimisha Mishra, and a main menu with options: Overview, Leads, Settings, and Logout. The main workspace shows the NVIDIA lead profile. At the top, there are three key metrics: AI Lead Score of 56/100, AI Status of Warm, and Priority of Medium. Below these is a navigation bar with tabs: Overview, AI Insights, AI Outreach, AI Lead Score, Conversation Intelligence, Activity, and Notes. The main content area is divided into two columns: Company Information and Contact Information. The Company Information column lists Website (https://www.nvidia.com), Location (Bengaluru), and Industry (Technology). The Contact Information column lists Contact (Rishabh Sharma), Designation (CTO), Email (rishabh.nvidia@gmail.com), and Phone (-9125436450).

Screenshot 4 and 5 – AI Lead Intelligence / Company Analysis

This screenshot shows the detailed AI lead intelligence and company analysis for NVIDIA. The interface includes the same sidebar as the previous screenshot. The main workspace features a navigation bar with tabs: Overview, AI Insights, AI Outreach, AI Lead Score, Conversation Intelligence, Activity, and Notes. A button labeled 'Analyze Lead with AI' is visible. The main content area is divided into three sections: Tech Stack Ingestion, Executive Summary, and Strengths. The Tech Stack Ingestion section lists 'Kubernetes' and 'Artificial Intelligence'. The Executive Summary section provides a brief overview of NVIDIA's global presence and its focus on AI technologies. The Strengths section lists three key points: CTO-level contact provides direct access to decision-making authority, Strong alignment between Infosys' Cloud-Native, AI, and MLOps capabilities and NVIDIA's Kubernetes + AI stack, and Large enterprise budget and strategic focus on scaling AI workloads and GPU-accelerated services. The Risks section is partially visible at the bottom, mentioning NVIDIA's deep internal engineering talent and existing vendor ecosystem.

Active

Deploy

Large enterprise budget and strategic focus on scaling AI workloads and GPU-accelerated services.

Risks

- NVIDIA has deep internal engineering talent and existing vendor ecosystem, which may limit openness to external partners.
- Procurement and compliance processes for a large multinational can be lengthy and complex.
- Potential perception of Infosys as a traditional services firm rather than a cutting-edge AI partner.

Sales Strategy

Approach Rishabh Sharma as a strategic technology partner rather than a vendor. Position Infosys as an enabler of AI scaling and operational excellence through joint innovation, highlighting successful case studies of GPU-driven MLOps and Kubernetes modernization for other leading tech firms. Use thought leadership content (whitepapers, webinars) on AI workload orchestration and propose a collaborative proof-of-concept to demonstrate tangible value.

Next Best Action

Send a concise, personalized outreach email to Rishabh Sharma proposing a 30-minute discovery call to discuss a joint AI workload modernization workshop, and attach a one-pager on Infosys' GPU-optimized MLOps and Kubernetes services.

Subject

Co-innovating NVIDIA's AI & Kubernetes modernization

Personalized Email

Dear Rishabh,

I've been following NVIDIA's rapid expansion of AI-driven GPU workloads and your strategic push toward Kubernetes-based, cloud-native architectures. Your leadership in AI adoption aligns closely with Infosys' expertise in high-performance computing and digital transformation.

Our analysis highlights three immediate opportunities: co-developing AI model training pipelines optimized for NVIDIA GPUs across hybrid-cloud environments; extending your Kubernetes footprint with managed services and DevSecOps automation to boost deployment velocity and security; and modernizing your enterprise data platform using Infosys' data engineering and analytics capabilities.

Infosys can accelerate these initiatives by leveraging our proven GPU-accelerated cloud solutions on Azure ND and AWS G5 instances, introducing AI-enabled observability and auto-scaling for optimal GPU utilization, and providing end-to-end MLOps frameworks that integrate seamlessly with NVIDIA's AI libraries. We also propose a joint innovation lab to align our roadmaps and deliver measurable outcomes.

Would you be open to a 30-minute executive briefing next week to review a one-pager of NVIDIA-specific use cases and explore a collaborative path forward?

Best Regards,

Talking Points

Screenshot 7 – AI Lead Score tab

The screenshot displays the SalesGenie AI Sales Assistant interface. On the left is a dark blue sidebar with the SalesGenie logo and navigation options: Overview, Leads, Settings, and Logout. The main workspace shows the 'AI Lead Scoring' section. It features a 'Lead Score' of 56/100 and an 'AI Confidence Score' of 56/100. A yellow box indicates 'Priority: Medium'. Below this, the 'Next Best Action' section suggests prioritizing the lead based on its current AI score. The 'AI Reasoning' section explains that the score is calculated using company profile, decision-maker, technology fit, industry fit, budget, engagement, and conversation signals.

Screenshot 8 – Conversation Intelligence / Call Transcript Analysis

The screenshot displays the SalesGenie AI Sales Assistant interface, specifically the 'Meeting Summary' section. The sidebar on the left is identical to the previous screenshot. The main workspace shows a 'Meeting Summary' with a 'Sentiment' of 'positive' and a 'Buying Intent' of 'high'. Below this, the 'Pain Points' section lists several challenges: scaling AI infrastructure for large ML workloads, improving GPU utilization and training efficiency, ensuring platform reliability, integrating new solutions with existing Kubernetes/Docker environment, and future scalability for growing AI workloads. The 'Objections' section lists a need for assurance that the proposed architecture integrates with existing infrastructure and can scale. The 'Next Actions' section lists two tasks: preparing a detailed technical architecture proposal and sending it to the CTO before the technical discussion.

Screenshot 9 and 10 – CRM / Kanban Pipeline and Follow-up Management

Screenshot 11 and 12 – Dashboard / Sales Analytics

7. Challenges Faced

During the implementation of the AI-Powered Intelligent Sales Forecasting Platform, several technical, AI, data, and integration-related challenges were encountered and addressed:

Integrating Multiple Modules

Connecting lead management, intelligence, outreach, scoring, recommendations, conversation analysis, CRM workflow, and analytics while keeping data consistent across modules.

AI Output Reliability

LLM responses can vary in structure. Structured prompts, validation, parsing, and deterministic fallback handling were used so that malformed AI output or provider failures would not break the workflow.

Lead Scoring Consistency

Ensuring that scoring reflects multiple sources of information, including lead attributes, technical requirements, company context, and conversation insights, while preserving existing scoring behavior during integration.

Conversation Transcript Processing

Converting unstructured call transcripts into useful structured insights such as requirements, interests, objections, and buying signals and associating those insights with the correct lead.

API and Database Integration

Maintaining reliable communication between the Streamlit frontend, FastAPI backend, SQLAlchemy data layer, and SQLite database.

End-to-End Workflow Testing

Testing the complete flow from lead creation through AI analysis, scoring, recommendations, conversation intelligence, CRM updates, and dashboard display.

internship. Mention how they were resolved or mitigated.

8. Learnings & Skills Acquired

- AI and Predictive Analytics: Gained practical experience applying AI-based analysis and predictive lead scoring to sales workflows.
- Backend API Development: Learned to design and integrate REST APIs using FastAPI and connect them with application modules.
- Database Management: Worked with SQLAlchemy and SQLite for storing leads, activities, conversation insights, and related sales information.
- LLM Integration: Gained experience using LLM-based services such as Groq for structured analysis, personalized generation, and sales intelligence.

- Sales Intelligence: Learned how lead attributes, company context, outreach activity, and conversation signals can be combined to qualify prospects.
- Conversation Intelligence: Learned to process call transcripts and extract structured sales insights for follow-up and reassessment.
- Frontend and Dashboard Development: Built interactive Streamlit screens for lead management, scoring, recommendations, CRM workflow, and analytics.
- Testing and Integration: Improved skills in module-level testing, API integration, failure handling, and end-to-end validation.
- Team Collaboration and Documentation: Strengthened coordination, Git-based development, technical documentation, presentation, and demo skills.

9. Testimonials from team

The project provided the team with practical exposure to AI-powered application development and sales analytics. Working across multiple modules helped the team understand how individual components can be integrated into a complete product workflow. The team gained experience in dividing responsibilities, coordinating development, debugging integration issues, testing AI-driven functionality, and preparing a working demonstration. The project also improved communication, problem-solving, documentation, and presentation skills.

Each team member contributed to the development and refinement of the platform, and the overall experience strengthened the team's confidence in building practical AI applications that combine frontend interfaces, backend APIs, databases, and LLM-based intelligence.

10. Conclusion

Overall, the AI-Powered Intelligent Sales Forecasting Platform using Predictive Analytics provided a comprehensive learning experience in AI, backend development, database management, sales intelligence, dashboard engineering, testing, and system integration. The completed platform demonstrates an end-to-end sales workflow in which leads are captured, enriched with intelligence, scored, prioritized, supported with recommendations, analyzed through sales conversations, and monitored through CRM-style activities and analytics.

The project helped the team understand how AI and predictive analytics can be incorporated into practical sales processes to reduce manual effort, improve lead prioritization, and support better decision-making. The internship also strengthened technical collaboration, problem-solving, documentation, and presentation skills that will be valuable for future software and AI projects.

11. Acknowledgements

We sincerely express our gratitude to Infosys Springboard and our mentors for providing us with the opportunity to work on this project. We are thankful for the continuous guidance, feedback, technical support, and encouragement provided throughout the internship. The internship gave us valuable hands-on experience in AI, software development, predictive analytics, testing, teamwork, and professional documentation.

We also thank everyone who contributed directly or indirectly to the successful completion of the project and final demonstration.
